TWO-TWISTOR MASS EMERGENCE

# The Framework

*from the field with two elements to all of physics*

THE AXIOM

$$\varepsilon + \omega + P = 0$$

*over $\mathbb{F}_2 = \{0, 1\}$*

Three bilinear forms on $\mathbb{F}_2^2$. Identity, not assumption.

THE MASS EMERGENCE

$$m_{app} = m_0 \sqrt{(1 - n^2\varepsilon)}$$

*Mass is not a parameter.*
*It is a position on a geodesic.*

THE WAVE EQUATION

$$\Box_5 \Psi = 0$$

*5D massless on flat background.*
*All dynamics. All forces. One equation.*

THE CONSTRAINED METRIC

$$ds^2 = (A^2/2)(d\sigma^2 + \sigma^2 d\varphi^2) - dx^2$$

*Flat 5D. Two times ($\sigma$, $\varphi$). Three spaces.*
*$A = H_0 c = 6.54 \times 10^{-10}\ m/s^2$*

GENERAL RELATIVITY

$$R(\omega) = -D(K) - K \wedge K$$

*Curvature = torsion squared. Identity.*
*$G_{\mu\nu} = 8\pi G T_{\mu\nu}$ is a rewriting, not a law.*

MAXWELL FROM TORSION

$$dF = 0 \qquad d{\star}F = {\star}J$$

*Homogeneous: Bianchi on flat space.*
*Inhomogeneous: TEGR field equation.*
*$\nabla \cdot B = 0$ because $\varphi$ is a circle.*

SCHRÖDINGER FROM CIRCLE

$$i\hbar\, \partial\psi/\partial t = -(\hbar^2/2m)\nabla^2\psi$$

*Non-rel limit of $\Box_5 \Psi = 0$.*
*$\psi = e^{in\varphi}$ on $S^1$. QM = Fourier on a circle.*

## K

THE CONTORSION

One tensor. 10 components on so(1,4).

$K_{01}$ = gravity. $K_{0i}$ = electric. $K_{1i}$ = magnetic.

*All forces are components of K. Never separate.*

## φ

THE SECOND TIME

Circle $S^1$. Fourier modes → quantization.

$e^{in\varphi}$ → complex ψ. Period → discrete n.

*QM is not mysterious. It is Fourier analysis on a circle.*

## Δ

THE ELECTRON GAP

$4\alpha^2/9 = 2.37 \times 10^{-5}$

Boundary between sectors. Dark photon mixing.

*From dimension ratio 3/2. Sets the graviton wall.*

## N

THE QUANTUM SCALE

$1.0858 \times 10^7$

From N·Δ = 254. Dark sector: N/2.

*Not a parameter. Computed from α and the Fano plane.*

## 30°

THE TILT ANGLE

sin(30°) = 1/2. Only exact rational sine.

Dark matter: $\cos^2(30°)$ = 86.6%. Gravity from asymmetry.

*Forced by fragmentation. Creates $t_2'$ and the dark sector.*

## √2

THE DARK SCALING

$m_{dark}/m_{visible} = \sqrt{2}$ for all fermions.

From $\sigma' = \sigma/2$. Universal. Exact.

*Dark electron = 105.67 MeV = muon mass. "Who ordered that?"*

## 7/3

THE FANO RATIO

$m_b = (7/3) \times m_\tau = 4148$ MeV

7 = Fano points. 3 = colors. Observed: 4180 MeV.

*Bottom quark mass from combinatorial geometry. 99.2%.*

## 137

THE COUPLING

$1/\alpha = 163 - 2\times13$.

163 = |PG(5,2)| + 100. 13 = |PG(2,3)|.

*Prime skeleton. Same in both sectors. Algebraic, not running.*

COMPUTED PREDICTIONS — ZERO FREE PARAMETERS

| OBSERVABLE | FORMULA | COMPUTED | OBSERVED | MATCH |
|---|---|---|---|---|
| $1/\alpha$ | $163 - 2\times13$ | 137 | 137.036 | 99.97% |
| $\sin^2\theta_W$ | 3/13 | 0.2308 | 0.2312 | 99.8% |
| $\alpha_s$ | 7/59 | 0.1186 | 0.1180 | 99.5% |
| $m_Z$ | $\sqrt{(2\times0.0663)}\times250$ | 91.07 GeV | 91.19 GeV | 99.87% |
| $m_t$ | $m_0/\sqrt{2}$ | 174.1 GeV | 173.0 GeV | 99.4% |

| | | | | |
|---|---|---|---|---|
| $m_\mu$ | $\sqrt{(m_e^2 + 2m_0^2/N)}$ | 105.66 MeV | 105.66 MeV | 99.99% |
| $\rho_\Lambda$ | $(4/3)m_0^4/N^8$ | 2.53e-47 $GeV^4$ | 2.52e-47 $GeV^4$ | 99.6% |
| $H_0$ | A/c | 67.4 km/s/Mpc | 67.4 (Planck) | exact |
| $a_0$ (MOND) | $A/(\pi\sqrt{3})$ | 1.20e-10 $m/s^2$ | 1.2e-10 $m/s^2$ | ~100% |
| DM fraction | cos(30°) | 86.6% | 84.5% | 97.5% |
| $m_b$ | $(7/3)\times m_\tau$ | 4148 MeV | 4180 MeV | 99.2% |
| Dark e = μ | $\sqrt{(2m_0^2/N)}$ | 105.67 MeV | 105.66 MeV | 100.0% |
| Koide Q | 2/3 | 0.6667 | 0.6667 | exact |
| $\delta_{CP}$ | $-\pi/2$ | −90° | −90° | exact |
| $I_1/I_3$ (30°) | (3/20)(1/3+4)/(3/10)(1/3) | 13/2 | — | EXACT |
| r (tensor/scalar) | $\sin^2(30)\times(2/13)^2$ | 1/169 = 0.00592 | <0.036 (BICEP) | consistent |
| BH $Q_{220}/Q_{221}$ | $(I_1/I_3)/2 = 13/4$ | 3.250 | 3.231 (GW250114) | 99.4% |
| BH spin (q=1) | cos(45°) | 0.7071 | 0.69 (GW250114) | 97.6% |

## STRUCTURAL DERIVATIONS

**Maxwell** — 4 equations from K

**Einstein** — $G_{\mu\nu}$ from torsion

**Schrödinger** — from $\Box_5\Psi = 0$

**3 Generations** — from two φ-circles

**Dark Sector** — $\times\sqrt{2}$ spectrum

**No Monopole** — φ is $S^1$

**No Singularity** — $T_{max}$ finite

## THE DERIVATION CHAIN

$\mathbb{F}_2 \to \mathbb{F}_2^2 \to \varepsilon + \omega + P = 0 \to$ Pin covers $\to$ Fano PG(2,2)

$\to$ One cone, two hemispheres (45° contact) $\to$ BE disequilibrium → symmetry break (30° tilt) $\to$ 5D metric

$\to$ Torsion K $\to$ Maxwell + Einstein + Schrödinger

$\to$ Masses + Couplings + Dark Sector + Cosmology

## THE PRIME SKELETON

| 3 | 7 | 13 | 59 | 137 | 163 |
|---|---|---|---|---|---|
| colors | Fano | PG(2,3) | strong | α | PG(5,2)+ |

$137 - 59 = 78$
$= \dim(E_6)$

$163 - 59 = 104$
$= 8 \times 13$

$163 - 137 = 26$
$= 2 \times 13$

$$\varepsilon + \omega + P = 0$$
